DUAL BALANCE

DUAL BALANCE

Scotty Cameron Dual Balance putters provide unmatched stability for golfers that struggle to make a consistent stroke with a conventional length putter.

PLAYER BENEFITS

HEAVIER HEAD by 50g provides increased weight and inertia to stabilize the putting stroke.

COUNTERWEIGHT of 50g in the butt of the shaft provides increased weight near the hands to stabilize the putting stroke.

15" GRIP is designed to be gripped down to place the counterweight above the hands to avoid flipping or dragging the butt of the shaft during the stroke.

MODEL CHOICES from each family; Select, GOLO and Futura X, allow you to choose a Dual Balance putter that meets your visual preference.

LENGTH OPTIONS from 36-40" allow you to choose a Dual Balance putter that meets your set-up and grip requirements.

NEWPORT 2 DB

A modern blade with crisp contours and a flowing single bend neck.

GOLO 5 DB

Angled back mallet with a crisp single bend shaft.

FUTURA X DB

High MOI mallet with advanced perimeter weighting and double bend shaft.

FUTURA X5 DB

Angled, wing back mallet with a crisp single bend shaft.

Dual balance means additional weight in both the head and grip to help stabilize your stroke.

SPECIFICATIONS

MODEL	LOFT	LIE	LENGTHS	NECK	TOE FLOW	OFFSET	STOCK GRIP
